

● B Bubble suspended LED lamp by B light

January 22nd, 2014 by retail design blog

B Bubble by B light is a decorative suspended luminaire with a unique characteristic: for the first time, the LED technology is used to create a decorative shape for an extraordinary union between design and technology. B Bubble is characterized by a delicate and minimalist style and by two different textures, smooth and wave. It is available in five different finishes: white, bronze, anthracite, bronze with white interior and anthracite with white interior and with a 2700K e 3000K colour temperature with an excellent colour rendering index (CRI 93). Thanks to its use flexibility B Bubble is ideal to light houses, shops, bar and restaurants.

It is possible to have the 24 Vdc power supply too. This new technology called Smart Power 24 Vdc is introduced by B Light inside many off-the-shelf products and it permits to simplify the installation, to offer high performances and to guarantee LED's life expectancies. The Smart Power technology products' characteristics are many: all the products apply a constant 24 Vdc power supply with parallel connection allowing to simplify the wiring and guaranteeing the working even in case of damage; thanks to the Hot Plug, the luminaire can be connected to the LED driver even without a previous disconnection of the driver from the power plug, in this way you avoid the "hot" burning of LED.

To simplify and speed the installation B Light applies the bipolarity that is able to guarantee the working even in case of the polarity inversion. Thanks to the Soft Start system – control electronics guaranteeing the power supplied – the electricity is gradually brought to its nominal value, so, avoiding, in this way, over range currents that would damage the LED by compromising its long-life expectancy. Furthermore, all the B Light tools are designed in order to guarantee the reaching of 50.000 hours of working thanks to the electronics control of the LED temperature.
